CAREER OBJECTIVE

.NET Developer with hands-on skills in C#, ASP.NET Core, Entity Framework Core, and SQL-based backend development. Skilled in building secure REST APIs with JWT authentication and clean architecture practices. Looking to start my career as a backend developer in a dynamic team.

PROJECTS

1. Employee Management System

Tech Stack: C#, ASP.NET Core Web API, Entity Framework Core (DB-First Approach), Fluent API, Repository Pattern, DTO Pattern, JWT, MySQL, SMTP

Web application to manage employee data including departments, roles, designation, salary, and leave approval workflow.

- Built REST API with layered architecture (**Model, Controller, Service, Repository**) using ASP.NET Core Web API
- Followed **Database-First approach** with Entity Framework Core, using **Fluent API** for entity configuration in MySQL
- Implemented **Repository Pattern** for data access and **DTO Pattern** with **manual object mapping** between entities and DTOs
- Implemented **JWT authentication** for secure member login and session management
- Integrated **SMTP** for leave status notifications

2. Marriage and Education Assistance Portal Project:

Tech Stack: C#, ASP.NET Core Web API, Entity Framework Core (DB-First Approach), Fluent API, Repository Pattern, DTO Pattern, JWT, MySQL, SMTP(Mailkit)

Web application for a community welfare association enabling members to apply for marriage and education/scholarship assistance, with admin approval workflow.

- Developed a RESTful backend API with layered architecture: **Model, Controller, Service**, and **Repository layers**.
- Used **EF Core (DB-First)** with Fluent API for **MySQL** configuration, **Repository** and **DTO patterns** for data access
- Implemented **JWT authentication** and modules for department, role, salary, and leave apply/approval
- Built admin module to review, approve, or reject submitted applications
- Integrated email notifications via **SMTP** and recorded UPI/Bank Transfer payment details for approved applications
